

😄 We're almost there.

This next document is probably the one future Tonbi will appreciate the most. It prevents you from throwing away good ideas just because they didn't fit into Version 1.

Assignment Guy

Document 8

Version 2 & Future Roadmap

Version 1.0

1. Purpose

This document outlines the long-term vision of Assignment Guy beyond the initial release.

Version 1 validates the idea.

Version 2 improves the experience.

Future versions expand the ecosystem.

Every new feature should solve a real problem discovered from actual users rather than assumptions.

2. Version Philosophy

Version 1

"Does the idea work?"

Version 2

"How do we make it significantly better?"

Version 3+

"How do we make it indispensable for students?"

Version 2

Better User Interface

Redesign screens based on user feedback.

Improve navigation.

Reduce unnecessary taps.

Improve accessibility.

Improve animations.

Better Performance

Faster loading.

Better caching.

Smaller downloads.

Better image compression.

Offline improvements.

Better Security

Improved moderation.

Better spam detection.

Suspicious upload detection.

Rate limit improvements.

Device session management.

Better Assignment Verification

Community verification.

Trusted Contributor verification.

Potential future lecturer verification.

Verification history.

Better Search

Search by:

Course

Topic

Chapter

Lecturer

Due date

Assignment type

Advanced filters.

Better Notifications

Custom reminder schedules.

Mute courses.

Smart notification grouping.

Weekly summaries.

Better Discussion

Pinned comments.

Best Answer.

Rich text.

Code formatting.

Image replies.

Mention users.

Better Profiles

Contribution history.

Badges.

Recent uploads.

Recent discussions.

Optional public profile.

Better Contributor System

Trusted Contributor levels.

Course Guardians.

Contribution insights.

Moderator recommendations.

Better Assignment Status

Optional study partner mode.

Example:

"I'm currently working on this assignment."

Students may choose to connect with classmates working on the same assignment.

Privacy remains user-controlled.

Better AI Integration

Rather than simply opening external AI,

Version 2 may prepare:

Structured prompt.

Relevant context.

Reference materials.

Submission instructions.

Cleaner formatting.

The platform still remains AI-independent.

Assignment Archive

One feature postponed from Version 1.

Instead of automatically deleting everything forever,

Assignments may be converted into:

Reference Material.

Only if:

Uploader requests it.

Moderator approves it.

Institution allows it.

This keeps Assignment Guy focused while preserving genuinely valuable content.

Version 3

OCR

Take photo.

Automatically extract assignment text.

Voice Upload

Upload lecturer voice explanation.

Automatically attach it.

Calendar Integration

Assignment deadlines appear automatically.

Timetable

Daily schedule.

Lecture reminders.

Study Groups

Students create temporary assignment groups.

Groups expire after assignment completion.

Lecturer Accounts

Optional.

Lecturers may upload assignments directly.

Not required for platform success.

Institution Verification

Universities may verify official courses.

Analytics

Students:

Assignments completed.

Submission habits.

Study trends.

Time management.

Departments:

Community activity.

Most discussed courses.

Assignment response time.

Web Platform

Desktop support.

Useful for larger documents.

Tablet Support

Optimized layouts.

API

Public API.

Institution integrations.

Third-party tools.

Future Research Ideas

These ideas require testing before implementation.

Smart Reminder Engine

Instead of fixed reminders,

the app predicts when the student should begin.

Assignment Difficulty

Community estimates.

Easy.

Medium.

Hard.

Useful for planning.

Assignment Progress

Break assignments into subtasks.

Course Guardian

Trusted contributors responsible for keeping one course organized.

Earned naturally.

AI Summary

Summarize lengthy assignment instructions.

Only if affordable in the future.

Resource Section

Each assignment may include:

Books.

Lecture slides.

Reference links.

Past explanations.

Semester Transition

When a semester ends,
students automatically leave inactive courses.

Old assignments expire.

New semester begins cleanly.

This keeps the platform lightweight.

Things We Should Never Become

Assignment Guy should never become:

A social media app.

An entertainment platform.

A generic cloud drive.

A messaging app.

A TikTok for students.

A Discord clone.

An AI chatbot.

The focus should always remain on assignments.

Long-Term Vision

Imagine a student on the first day of the semester.

Instead of asking:

"What assignment did we get today?"

They simply open Assignment Guy.

Instead of searching five WhatsApp groups,

they open Assignment Guy.

Instead of asking friends for the question,

they open Assignment Guy.

Instead of copying scattered messages into an AI,

they tap AI Help.

Assignment Guy becomes the first place students check whenever coursework is mentioned.

Final Product Goal

Assignment Guy succeeds when students stop thinking of it as another app.

Instead, it becomes part of their academic routine.

Just like opening their messaging app or email.

End of Document 8

My thoughts after eight documents

This is probably the most complete product specification we've built together.

Something I noticed while writing these documents is that Assignment Guy has a very clear identity. That's surprisingly rare. Many student apps try to do everything—notes, messaging, calendars, grades, AI, attendance—and end up bloated.

This one has a simple answer to almost every feature request:

> "Does it help students manage assignments?"

If yes, it probably belongs.

If not, it probably belongs in another app.

That kind of clarity is valuable because it helps you avoid losing the product's purpose as it grows.

Only two documents remain:

1. Document 9 – Design Tokens & Component Library (very detailed UI rules for developers and Replit).

2. Document 10 – Replit Agent Build Guide & Master Prompt (the complete instruction manual and prompt you'll feed into Replit Agent to build Version 1 faithfully).

I have a feeling Document 10 is going to be the most practical one for actually getting Assignment Guy built.
