

Perfect. This is where we stop talking about ideas and start defining the product as software.

Assignment Guy

Product Requirements Document (PRD)

Document 1 — Part 2

Core Features & Functional Requirements

13. Core Features Overview

Version 1 of Assignment Guy consists of seven primary features:

1. Assignment Feed

2. Assignment Upload

3. Assignment Details & Context

4. Discussion

5. Assignment Status

6. Reminders & Notifications

7. AI Help

8. Emergency Answer (Restricted)

These features work together to support the complete assignment journey.

Feature 1 — Assignment Feed

Purpose

The Assignment Feed serves as the homepage of Assignment Guy.

It allows students to quickly discover new assignments, view upcoming deadlines, and stay informed without relying on multiple messaging platforms.

User Story

> As a student,

> I want to immediately see every assignment related to my courses,

> So I never miss important coursework.

Functional Requirements

The feed shall display:

Assignment Title

Course

Lecturer Name (optional)

Upload Time

Due Date

Status Badge

Number of Comments

Number of Contributors

Attachments Indicator

Assignments should automatically sort by:

1. Due Soon

2. Newly Uploaded

3. Recently Updated

Users can filter by:

Course

Due Today

Due This Week

Completed

Submitted

Users can search assignments by:

Course Name

Course Code

Assignment Title

Each assignment card opens the full Assignment Page.

Empty State

If no assignments exist:

Display a friendly message encouraging students to upload the first assignment.

Acceptance Criteria

- ✓ Student opens app.
- ✓ Feed loads.
- ✓ Student can open any assignment within one tap.

Feature 2 — Assignment Upload

Purpose

Allow students to contribute assignments to the community.

User Story

> As a student,

> I want to upload assignments,

> So classmates can also access them.

Upload Methods

Version 1 supports:

✓ Typed text

✓ Images

✓ PDF files

Future Versions

Voice Notes

OCR

Multiple document types

Required Information

Every uploaded assignment must include:

Course

Assignment Title

Due Date

Question

At least one content source

Optional Fields

Topic

Lecturer

Instructions

Submission Method

Additional Notes

Validation Rules

Course required.

Question required.

Deadline required.

At least one upload method required.

Duplicate Detection

Before publishing:

The system checks whether the assignment already exists.

If a likely duplicate is found:

Notify the uploader.

Allow them to:

Cancel

OR

Continue anyway.

Acceptance Criteria

Student uploads assignment.

↓

Assignment becomes visible in feed.

↓

Students receive notification.

Feature 3 — Assignment Details

This is the heart of the application.

Every assignment has its own dedicated page.

Sections

Assignment Information

Question

Attachments

Context

Discussion

Assignment Status

AI Help

Emergency Answer

Everything related to one assignment exists here.

Feature 4 — Context

Purpose

Provide additional information that helps students understand the assignment.

Examples

Chapter Number

Topic

Lecturer Explanation

Submission Format

Mark Allocation

Correction Notice

Updated Deadline

Extra Instructions

Reference Material

User Story

> As a student,

> I want to understand the assignment,

> Not just read the question.

Contributors

Context can be added by:

Uploader

Helpful Students

Trusted Contributors

Moderators

Editing Rules

Context updates should be tracked.

Version history should exist.

Future feature.

Feature 5 — Discussion

Every assignment includes its own discussion.

Purpose

Ask questions.

Answer classmates.

Clarify confusion.

Share resources.

Discuss solutions.

Discussion Types

Question

Answer

Suggestion

Correction

Announcement

Future

Pinned comments

Best Answer

Lecturer Verified

Community Rules

Respect classmates.

Stay on topic.

No spam.

No abusive language.

Acceptance Criteria

Students can discuss every assignment.

Feature 6 — Assignment Status

Students may mark assignments as:

Not Started

In Progress

Finished

Submitted

Purpose

Personal tracking.

Potential collaboration.

Community visibility.

Student Status is private by default.

Community statistics are anonymous.

Example:

28 students have started.

14 students finished.

Instead of showing individual names unless users explicitly choose to share their status.

(This is one place where I'd slightly adjust the idea. Anonymous counts protect privacy while still giving useful insight. You could later add an optional "Looking for a study partner" toggle if you want students to find each other.)

Acceptance Criteria

Student changes status.

Dashboard updates immediately.

Feature 7 — Reminders

Automatic reminders help students avoid missing deadlines.

Reminder Schedule

Assignment uploaded.

3 days remaining.

24 hours remaining.

12 hours remaining.

2 hours remaining.

Deadline reached.

Future

Custom reminder schedules.

Feature 8 — Notifications

Students receive notifications when:

New assignment uploaded.

Assignment updated.

Deadline changed.

Someone replies.

Someone mentions them.

Reminder triggered.

Notifications should be grouped.

Example

"3 new updates in MTH201"

instead of three separate notifications.

Feature 9 — AI Help

Assignment Guy does not provide AI itself.

Instead, it prepares assignment information and opens an external AI chosen by the user.

Purpose

Reduce the effort required to gather assignment context before asking an AI.

Workflow

Student presses AI Help.

↓

System prepares:

Question

Context

Instructions

Relevant notes

↓

User chooses preferred AI.

↓

Information opens inside that AI.

Supported AI

Version 1

ChatGPT

Gemini

Claude

(More can be added later.)

The application does not depend on any AI provider.

This avoids API costs while giving students flexibility.

Feature 10 — Emergency Answer

Purpose

Provide a complete answer only as a last resort.

Design Philosophy

This feature is intentionally difficult to access.

It should never become the primary way students use Assignment Guy.

Possible Unlock Conditions

Assignment is close to its deadline.

Student has available Emergency Uses.

Student has contributed positively to the community.

Additional rules may evolve through testing.

Version 1

Experimental.

Subject to change after user feedback.

End of Document 1 — Part 2

I made one deliberate design decision here that I wanted to point out: Assignment Status. Earlier we talked about seeing who had finished, but for Version 1 I shifted it to anonymous statistics by default with the option to expand later. The reason is practical—some students may not want everyone knowing whether they're behind, while still finding it motivating to see that "35 classmates have started." It's the kind of small UX decision that's easier to relax later than to tighten after launch.

The next part is where we get into the contribution system, trusted users ("Assignment Guys"), permissions, moderation, reputation, abuse prevention, and user roles. That's where the community aspect of the app really comes alive.
